

SecureVault Online Backup

If you want to ditch your tape backup for something better there is only one option that ticks all the boxes - secure, online backup. Tape has dominated the backup market for so long because it has two overwhelming strong benefits - it's cheap (on the surface) and it's portable.

Therefore, any alternative has to be as cost-effective as tape and reside away from your server room. At Blue Chip we have developed an online backup solution that meets these business needs and more.

With SecureVault from Blue Chip your data backup can become a hassle free, low cost process; no more managing, logging, storing, transporting and restoring data from tapes. And the advantages don't stop there - SecureVault provides Disaster Recovery as added functionality to your current Backup solution, at no additional cost.

Easy. Secure. Reliable. Affordable.

Our SecureVault Online Backup service gives you exactly what you need from a backup solution:

- **It's easy.**

Data backups happen invisibly. Log in online to select data for recovery and download it immediately. Price calculations are simple.

- **It's secure.**

All your data is encrypted as it is transferred to the SecureVault. The SecureVault servers are housed in Blue Chip's premises or in a secure Data Centre. You can choose to encrypt your data so that it can only be read and restored using the passphrase you choose, ensuring that only you have access to your confidential data.

- **It's reliable.**

Every element in our network is highly available so that should any point fail your data will still be available to you whenever you need.

- **It's affordable.**

We know in today's economic climate that 'cost' is a main concern, that's why prices start from as low as £1.25 per GB stored - and that's after we have de-duped and compressed it. In addition, SecureVault provides Disaster Recovery as added functionality to your current Backup solution at no additional cost.

Why use Blue Chip's SecureVault Service?

1. Extensive multistage de-duplication on the agent and on the data vault means you will only store, and pay for, one instance of your data.
2. Data compression, combined with de-duplication, means you only store about 50% of the original data volume when you run the first backup. Each additional backup, that you store, will add approximately 1-2% more to the pool of stored data.
3. Dual backend vaults protect your data, so you have your critical data in three locations. Data is available for immediate restore online should you lose your primary copy.
4. The system restore option allows for bare metal restore so you can restore your systems and data to disparate hardware in the event of a disaster.
5. Includes Plug-Ins for key industry applications:
 - a. Exchange - enables you to back up and restore an entire Microsoft Exchange database.
 - b. SQL - enables you to protect your entire Microsoft SQL database and to back up transaction logs.
 - c. SharePoint - enables you to back up an entire portal, one or more site collections, or individual documents.
 - d. Oracle - enables you to quickly capture live Oracle databases and to flexibly restore the entire database or individual files.

How does it work?

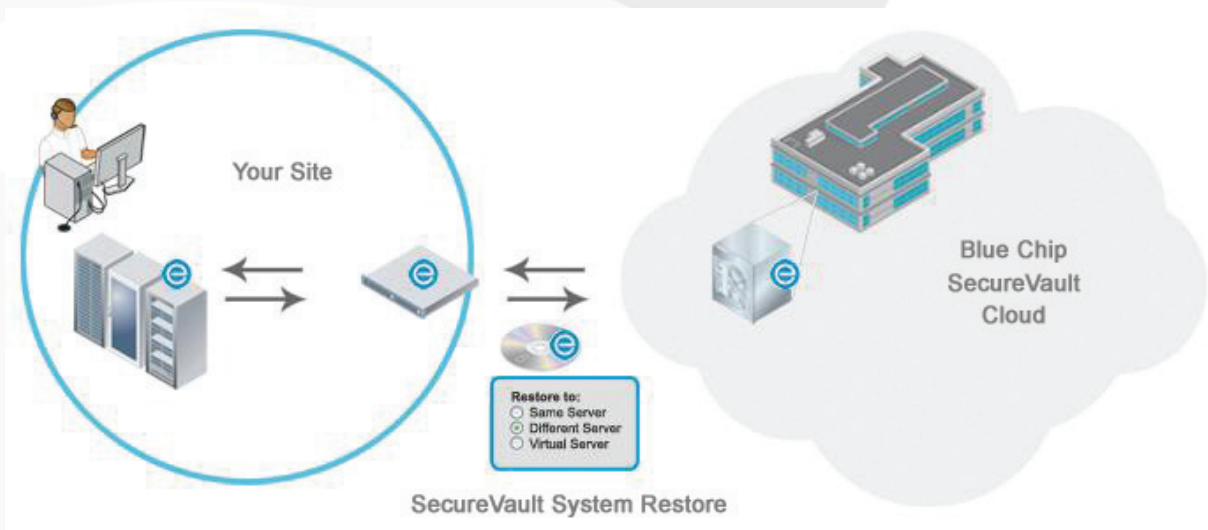

The SecureVault service is extremely straightforward.

1. The SecureVault agent is installed on your server(s).
2. We configure the agent backup jobs.
3. The initial backup is completed using our Quickship Vault.
4. Scheduled backups run from your servers to the SecureVault

(cont...)

5. Should you need to restore some data:

- a. You logon to the web portal
- b. Pick the dataset to restore from
- c. Pick the relevant files
- d. Choose the location to restore them to
- e. And click go!

Pricing

The monthly price you pay is calculated per server and the volume of data stored.

1. £10 per server (installed agent) per month
Plus £10 per Plug In - SQL, Oracle, Exchange or System Restore
2. £1.25 Per Gigabyte stored per month. Calculated after de-duplication and compression.
